

PREPARED FOR AMAZON · SITE LAUNCH

The closed-loop alert system.

Every alert sent, felt and acknowledged, with proof it landed. The Safewave Band, the Safewave Watch, the phone app and the dashboard, feature by feature.

PREPARED FOR
Amazon

INCLUDES
12 months of Safewave software

FROM
Safewave Technology · Brad Herald

01 THE CLOSED LOOP

Send. Feel. Acknowledge. Confirmed.

Most alerts are sent and hoped for. Safewave closes the loop: the alert is felt on the wrist, the wearer acknowledges it with one press, and the supervisor sees that it landed.

1

Send

A supervisor presses Notify on the dashboard, or Aware hears a fire alarm.

2

Feel

The band buzzes on the wrist until its button is pressed. The watch shows the message.

3

Acknowledge

One press of the band button, or a tap on the watch.

4

Confirmed

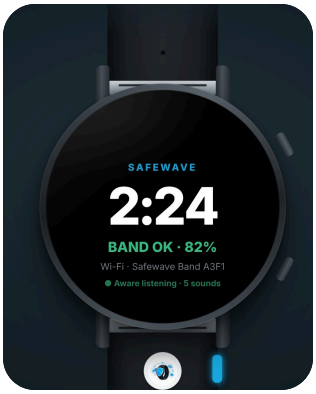

The dashboard turns Awaiting into Acknowledged, in real time.

Four parts, one system

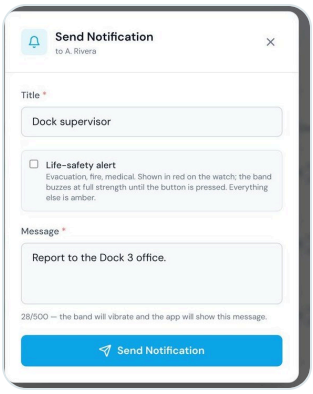

Safewave Band

Powerful vibration on the wrist, one button to acknowledge.

Safewave Watch

Links the band to the site Wi-Fi. No phone needed on the floor.

Dashboard

People, bands, alerts, alarms and acknowledgements in one place.

Safewave for Business

The phone app, where phones are allowed. Same alerts, same band.

BUILT FOR DEAF AND HARD-OF-HEARING ASSOCIATES

Safewave adds a channel; it replaces nothing. Building alarms, strobes and evacuation procedures stay as they are. Safewave makes sure every one of them is also felt.

02 THE SAFEWAVE BAND

Alerts you feel, not just hear or see

The Safewave Band attaches to a Samsung Galaxy Watch6 and delivers strong, distinct vibrations to the sensitive nerves of the wrist, so an alert reaches the wearer when they need it most.

The Safewave Band on a Samsung Galaxy Watch6, running Safewave.

Made for the Galaxy Watch6
The band attaches to the watch with the Safewave Adapter, so watch and band are one unit on the wrist.

Buzzes until acknowledged
An alert keeps going until the wearer presses the band's button. That press is the acknowledgement.

Life safety, unmistakable
Evacuation, fire and medical alerts buzz at full strength, distinct from everyday alerts.

Custom vibrations
Pattern and strength per alert type, from light to maximum.

Wireless charging
Drops onto its charger at the end of a shift.

Three sizes
Small, medium and large, for a secure fit and all-day comfort.

03 THE LOOP, ON SCREEN

An alert, start to finish

The watch holds the band's Bluetooth link and talks to the dashboard over the site Wi-Fi. The acknowledgement travels back the same way, and is retried until the dashboard has it.

Dashboard
The supervisor presses Notify

→ Wi-Fi

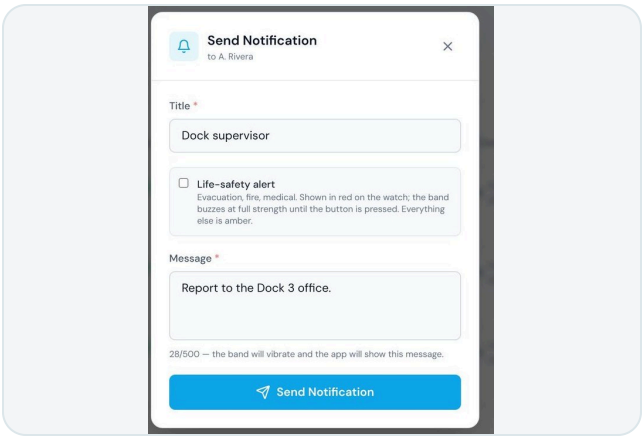

Safewave Watch
Shows the alert, even on a dark screen

→ Bluetooth

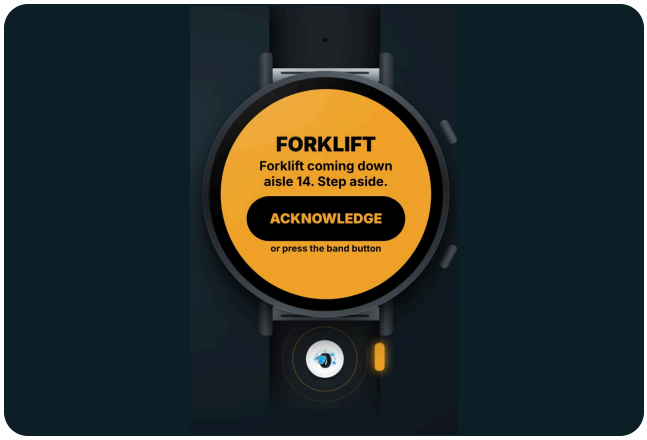

Safewave Band
Buzzes until the button is pressed

→ Ack

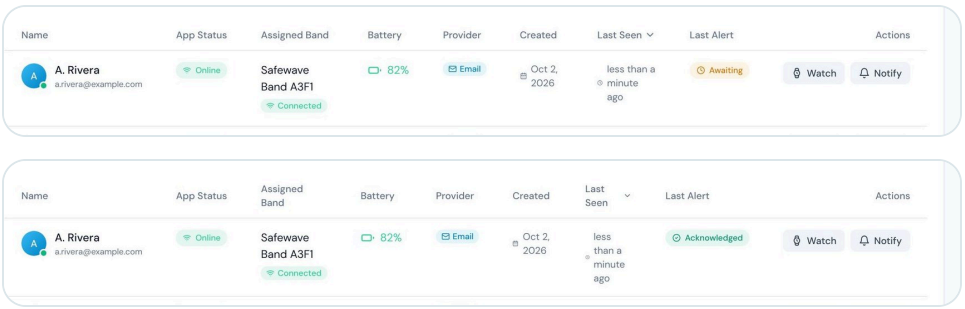

Dashboard
Awaiting turns Acknowledged

Send. Notify on the associate's row, a short title and the message.

Feel. The band buzzes nonstop and the watch shows the message until the band button is pressed.

Confirmed. Last Alert reads Awaiting until the button is pressed, then Acknowledged.

Two kinds of alert, never confused

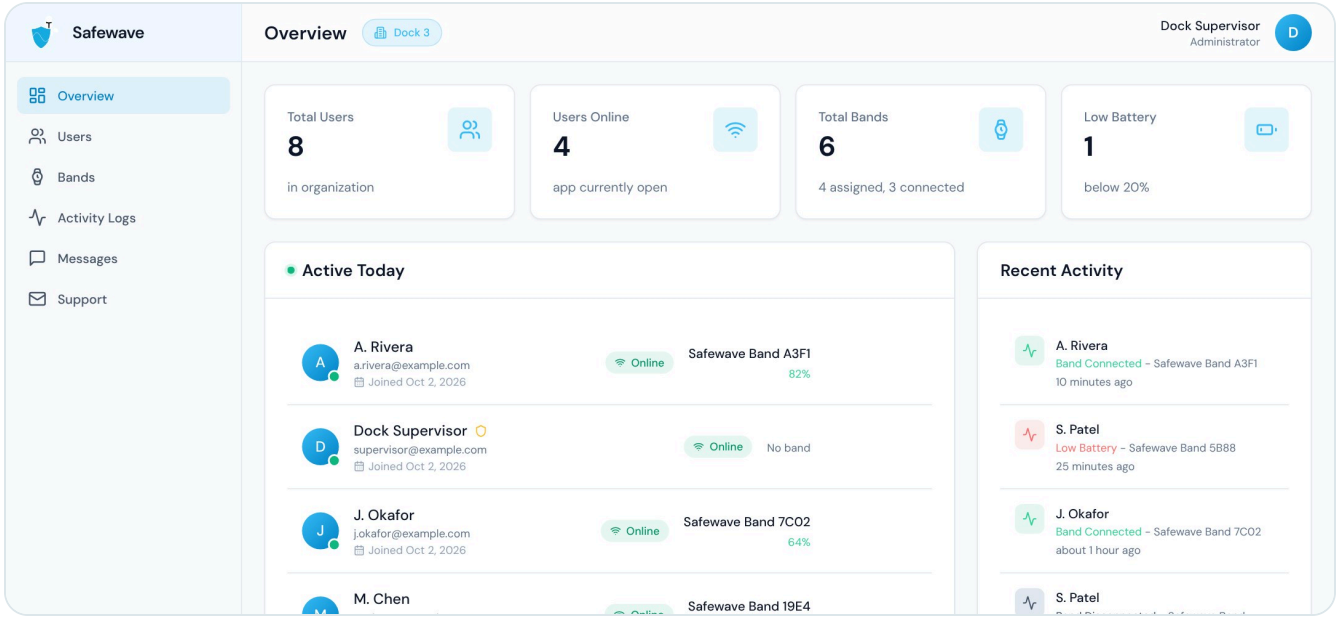

ROUTINE AND URGENT
Amber on the watch. "Report to the Dock 3 office." "Forklift coming down aisle 14."

LIFE SAFETY
Red on the watch, full-strength buzz until pressed. Evacuation, fire and medical only.

04 THE DASHBOARD

Everything a supervisor needs, on one screen

Supervisors sign in from any computer and see only their own site. The Overview answers the first question of every shift: is everyone connected?

Reading the Overview

1. **Users online**
   Who has Safewave open right now, out of everyone at the site.

2. **Bands**
   How many are assigned and how many are connected at this moment.

3. **Low battery**
   Bands under 20%, so they're swapped before they run out.

4. **Active today and recent activity**
   Who is on shift with which band, and the latest connects, disconnects and warnings.

Every page

Users
Every associate, their band and battery, and Last Alert. Notify and Watch live here.

Bands
The fleet: check bands out and in, see battery and connection.

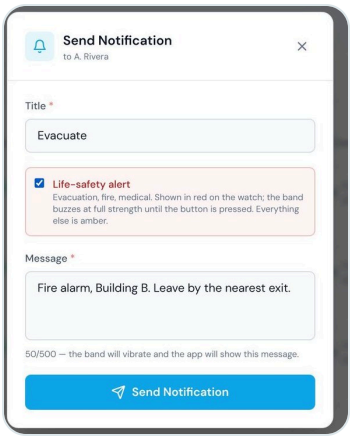

Activity Logs · Messages · Support
Every event on record, team channels, and a direct line to Safewave.

05 ALERTS AND ALARMS

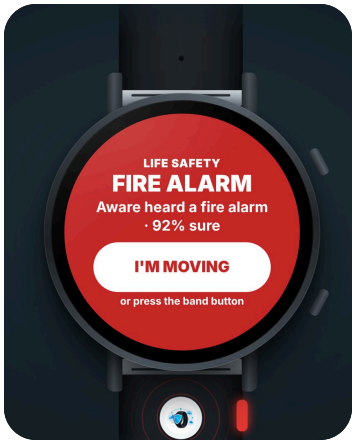

From Notify to the wrist in seconds

Every alert starts on the associate's row on the Users page, including the life-safety alarm reserved for emergencies.

1. **Press Notify on their row**
   The Send Notification form opens, addressed to that associate.
2. **Write a short title and message**
   Just what they need to do: "Report to the Dock 3 office."
3. **Life-safety when it matters**
   Tick Life-safety for evacuation, fire or medical. The watch turns red and the band buzzes at full strength until pressed.
4. **Watch Last Alert**
   Awaiting until the associate presses the band button, then Acknowledged.

The life-safety alarm: one box, ticked deliberately.

On the wrist: red, full strength. I'M MOVING or the band button acknowledges.

What every alert does

Wakes the watch
The associate never has to open anything; the alert comes to them.

Keeps buzzing
Until acknowledged, with the watch's own motor repeating as a backup.

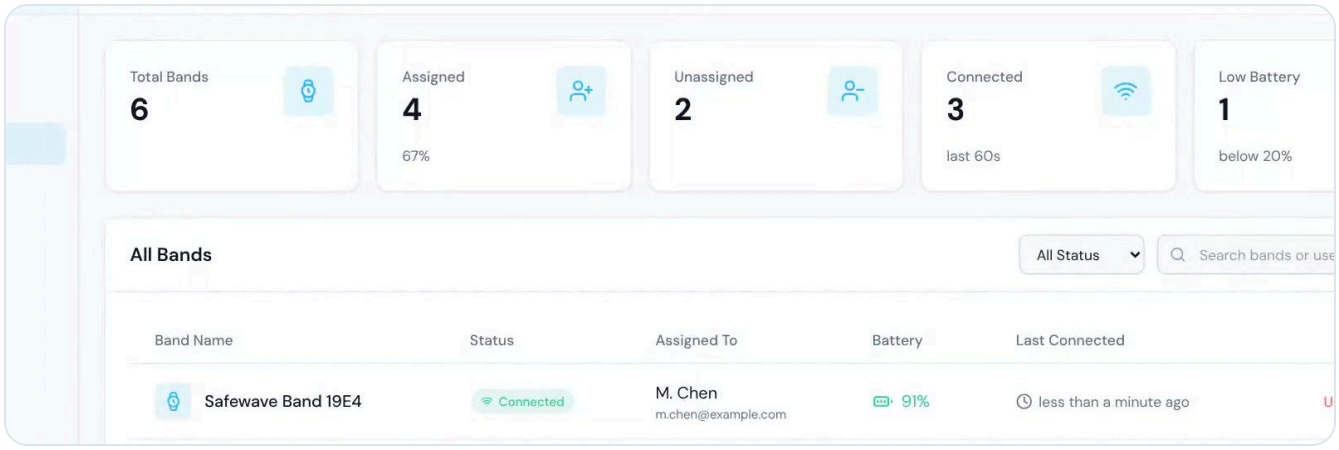

Never gets lost
If the watch is offline, the alert arrives the moment it reconnects.

Aware raises alarms too. When the watch hears a fire alarm or siren itself, it raises the same red life-safety alarm, with no supervisor needed.

06 CHECKING BANDS OUT AND IN

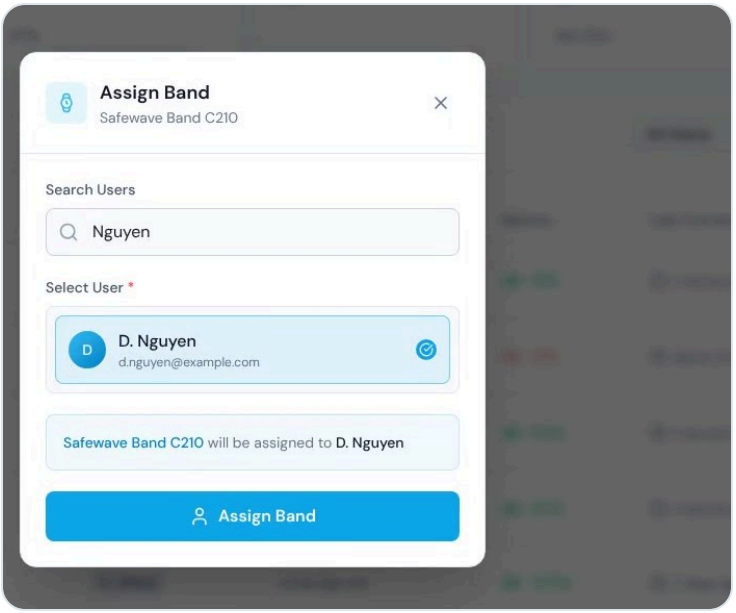

Shared bands, accounted for every shift

The Bands page tracks who has each band, so every shift starts with a charged band that's accounted for.

Total, assigned, unassigned, connected and low-battery counts, then every band with who has it, its battery and when it last connected.

1. **Check out**
   Find a free band, press Assign, search for the associate, and confirm. The band is theirs for the shift.
2. **Their band only**
   The associate's watch or phone connects to that band. A phone only lists the band assigned to them.
3. **Check in**
   Press Unassign and confirm. The band returns to the pool for the next shift.
4. **Every move on record**
   Each check-out and check-in is logged in Activity Logs.

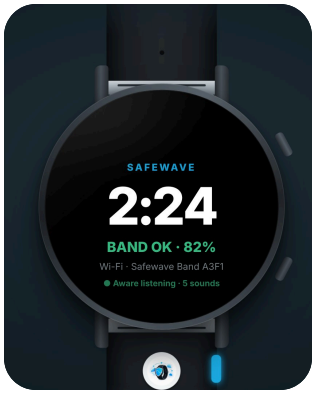

Checking a band out: pick the associate, confirm, done.

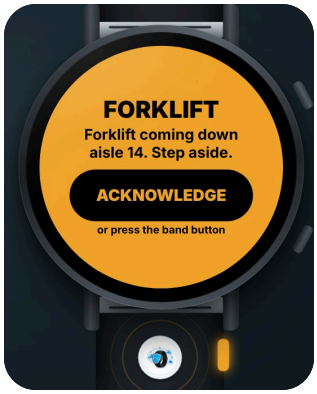

07 THE SAFEWAVE WATCH

The band's connection, on the wrist

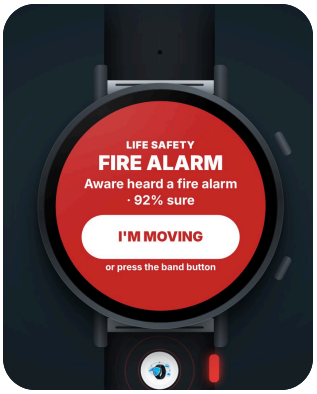

Safewave runs on the Samsung Galaxy Watch6 the band attaches to, locked so Safewave is the only app. It keeps the band connected all shift and says plainly when something needs attention.

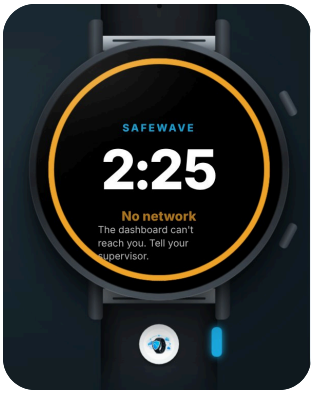

Ready. Band OK with its battery, the Wi-Fi network, and Aware listening.

An alert. Amber, with the message, until the band button is pressed.

Life safety. Red and full strength. I'M MOVING acknowledges.

Needs attention. An amber ring and a plain message when the band or Wi-Fi drops.

Built in

Band and watch, one unit

The Safewave Band attaches to the Galaxy Watch6. The watch reaches the dashboard over Wi-Fi; no phone needed.

Kiosk lock

Safewave is the only app; the Home key only wakes the screen.

Wakes for every alert

A dark watch lights up on its own. Nothing to open.

Signs in with a code

A 6-digit code from the dashboard: single use, valid 10 minutes. No passwords on watches.

Status every minute

Wi-Fi, band connection and battery reported to the dashboard every 60 seconds.

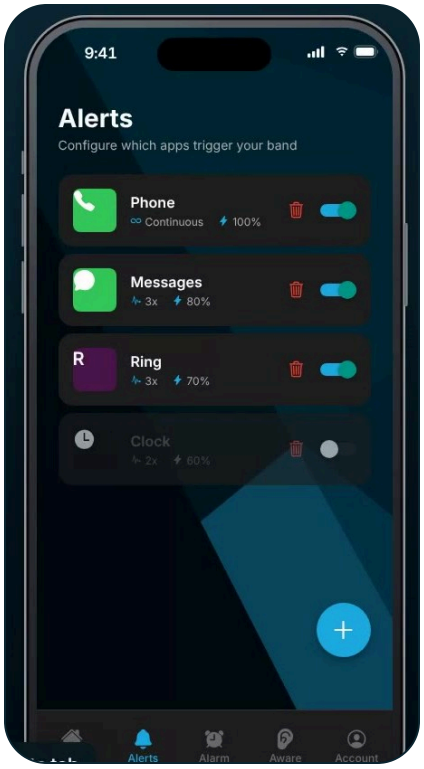

Test buzz

One pulse to the band, so the wearer feels what an alert will be like.

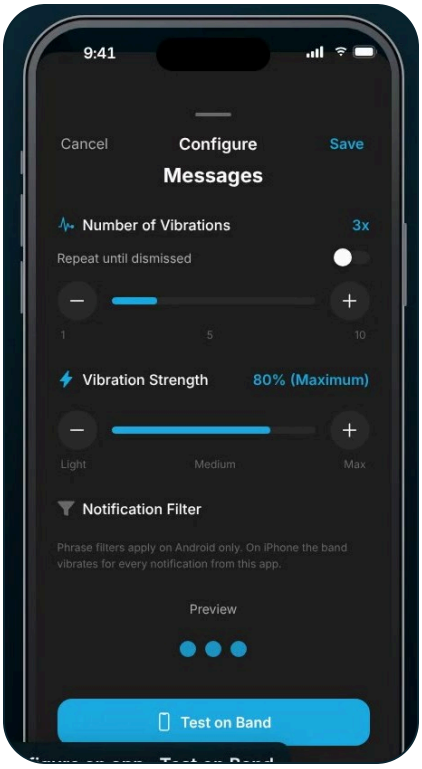

08 SAFEWAVE FOR BUSINESS

Where phones are allowed, the phone does the watch's job

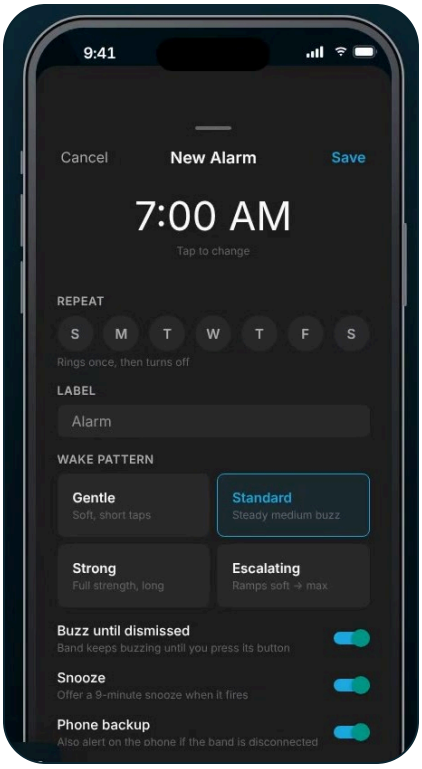

The Safewave for Business app pairs the band to a phone: the same supervisor alerts, plus the associate's own notifications and a silent alarm clock on the wrist.

Alerts. Choose which phone apps buzz the band (calls, messages, a doorbell camera), each with its own pattern.

Test on Band. Set vibration count and strength, then feel the pattern on the wrist before saving.

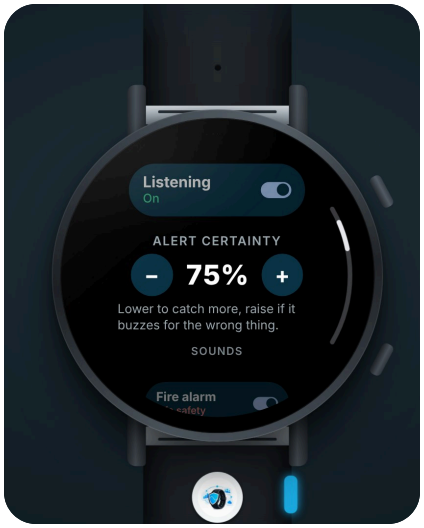

Alarm. A silent alarm clock: time, repeat days, a wake pattern from gentle to escalating, the phone as backup.

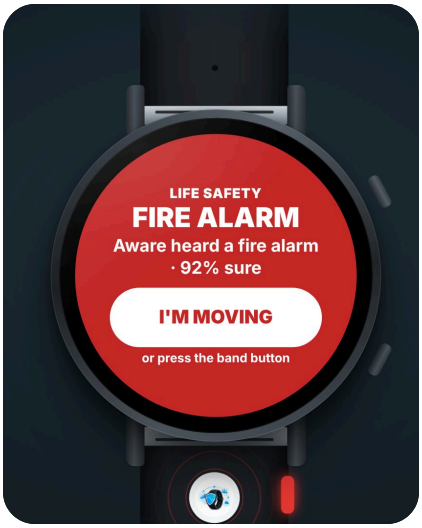

09 SAFEWAVE AWARE ON THE WATCH

The watch listens, so nothing important goes unheard

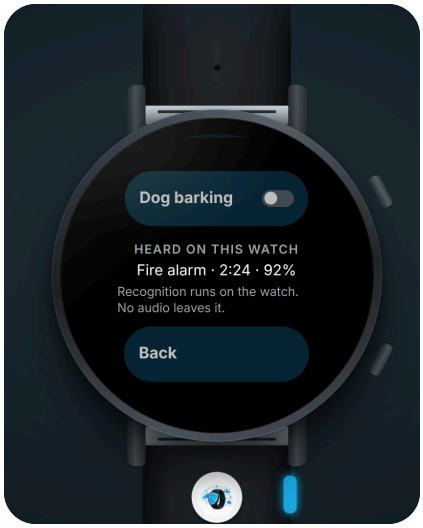

Aware recognizes important sounds on the watch itself and buzzes the band, with no supervisor needed. Recognition runs on the watch; no audio ever leaves it.

Choose the sounds. A switch for each sound, and an alert certainty from 50 to 95%.

A fire alarm goes off. The watch raises a red life-safety alarm; the band buzzes until acknowledged.

Heard on this watch. What was heard, when, and how sure Aware was.

Sounds the watch listens for

Life safety Fire alarm · Siren · Gunshot or explosion

Attention Alarm or buzzer · Vehicle horn · Reversing beeps · Shouting · Glass breaking · Knocking · Doorbell · Phone ringing, and more

Built to avoid false alarms

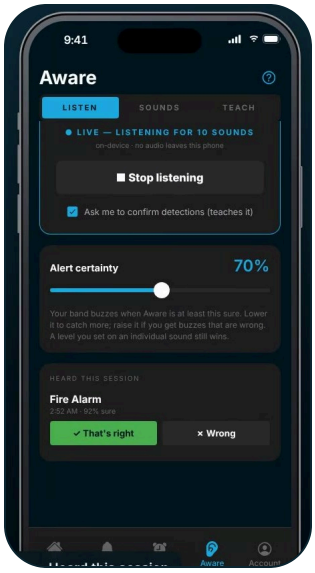

- **Certainty:** a sound must score above the level (70% by default).
- **Confirmed:** heard in two of the last three seconds.
- **No repeats:** then quiet for 45 seconds.

Aware adds to building alarms and supervisor alerts; it never replaces them. It can be switched on per watch, for the associates who need it.

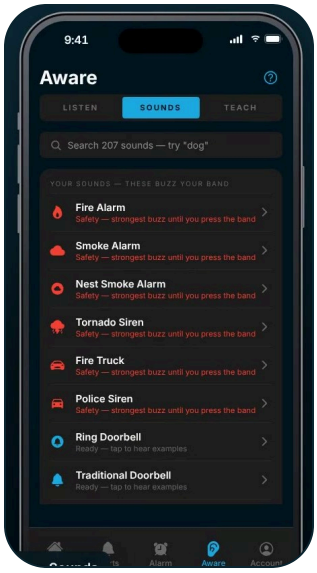

10 TRAINING SAFEWAVE AWARE

Aware learns your site's sounds

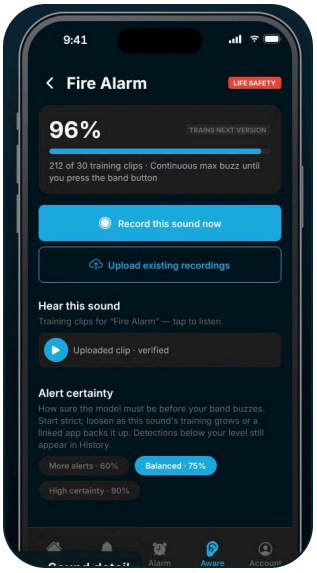

In the phone app, Aware comes ready-trained and keeps learning: from every confirmation an associate taps, and from sounds you teach it, like a forklift horn or a particular machine.

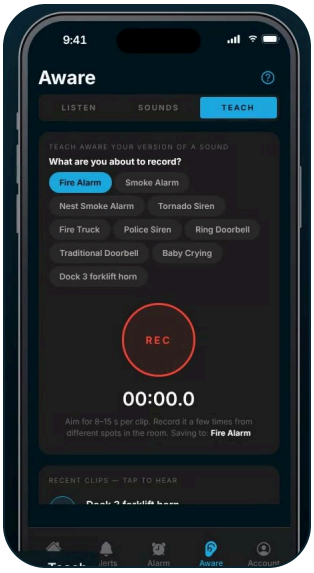

Listen. With "Ask me to confirm" on, each detection asks That's right or Wrong; every answer teaches it.

Sounds. A ready-trained library: fire and smoke alarms, tornado and police sirens, fire trucks, doorbells.

One sound. Training progress and clip count, its own certainty level, and linked apps like Ring or Nest that confirm it.

Teach. Record a few short clips of a site sound, name it, and share it with just you, your organization, or everyone.

Teaching a new sound

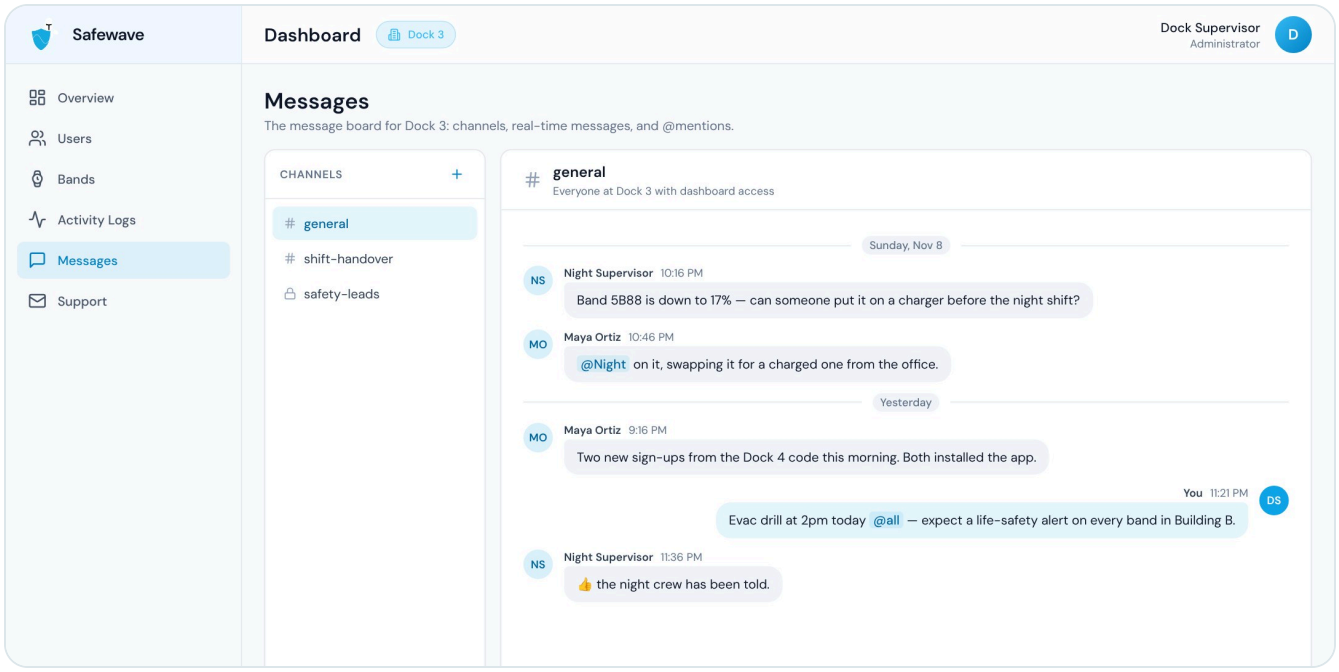

1. **Open Teach**
   Pick what you're about to record, or name a new sound.
2. **Record a few clips**
   Short recordings, from different spots on the floor.
3. **Share it**
   Choose who can use it: you, the site, or everyone.
4. **Confirm as it works**
   That's right or Wrong on each detection sharpens it.

Taught sounds live in the phone app's Aware. The watch listens for its built-in set of sounds.

11 TEAM MESSAGING

Supervisors stay in step, across shifts

Messages on the dashboard is a live, Slack-style space for the site's supervisors: handovers, drills, and anything that needs eyes on it.

Channels

A general channel for the site, plus channels by topic, such as shift handover.

Private channels

For a few people, such as the safety leads.

@mentions

Reach one supervisor, or @all before a drill.

SUPPORT, BUILT IN

Supervisors reach Safewave from the dashboard's Support page and follow the conversation there.

12 BUILT FOR THE FLOOR

When something goes wrong, everyone can see it

Safewave never fails silently. The watch tells the associate, the dashboard tells the supervisor, and no alert is lost.

IF	WHAT SAFEWAVE DOES
Wi-Fi drops	The watch says so and the dashboard shows it Offline. Alerts sent meanwhile arrive the moment it reconnects; acknowledgements retry until recorded.
The band walks out of range	The watch ring turns amber with a plain message. An alert that lands meanwhile buzzes the band the moment it reconnects.
Battery runs low	Band and watch battery are reported every 60 seconds; bands under 20% are flagged on the dashboard.
The watch restarts	Safewave starts again on its own after a reboot or update and reconnects the band.
Nobody acknowledges	The band keeps buzzing and the watch's motor repeats as a backup. The dashboard keeps showing Awaiting.

Privacy and access

No audio leaves the device
Aware recognizes sounds on the watch or phone and keeps only what it heard and when.

Site by site
Supervisors see only their own site's associates, bands and alerts.

No passwords on watches
Watches sign in with a single-use code that expires in 10 minutes.

13 INCLUDED WITH YOUR SITE LAUNCH

Twelve months of Safewave software

Your site's Safewave Bands come with twelve months of the full Safewave software platform.

The dashboard
Users, Bands, alerts and life-safety alarms, Last Alert acknowledgements, Activity Logs, team Messages and Support.

The Safewave Watch app
Wi-Fi and Bluetooth link to the band, alerts on the wrist, kiosk lock, status every minute.

Safewave for Business
Supervisor alerts, app notifications on the band, Test on Band, and the silent alarm.

Safewave Aware
Sound recognition on the watch and phone, the ready-trained library, and teaching your site's own sounds.

See it in action

RESOURCE	WHAT IT SHOWS
Training video safewave-command-center.web.app/training	22 minutes in chapters: the whole system, alerts, the phone app, Aware, messaging, and keeping things healthy.
Safewave Watch guide …/training/safewave-watch-guide.pdf	The watch, screen by screen, with the dashboard and phone side by side.
Dashboard demo safewave-command-center.web.app/dashboard-demo	The real dashboard on sample data. Press Notify and watch Awaiting turn Acknowledged.
