Safewave

A GUIDED TOUR · PREPARED FOR AMAZON

Alerts you can feel.

How Safewave puts every safety alert on the wrist of Deaf and hard-of-hearing associates, with no phone needed on the floor. A walk through the dashboard, the Safewave Watch, alarms, band check-out and check-in, and Safewave Aware, and how a pilot rolls out.

INSIDE THIS TOUR

The dashboard
Overview, alerts and life-safety alarms

Checking bands out and in
Shared bands, tracked shift to shift

The Safewave Watch
No phone needed on the floor

Alarms and practice
Feel it before it matters

Safewave Aware
Sound recognition, and training it

The pilot
Five weeks to a decision

PREPARED FOR
Amazon

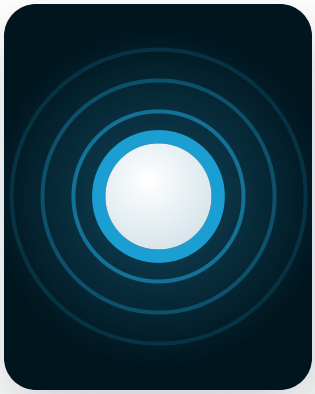

PREPARED BY
Safewave Technology · Brad Herald

EDITION
November 2026

01 SAFEWAVE IN ONE PAGE

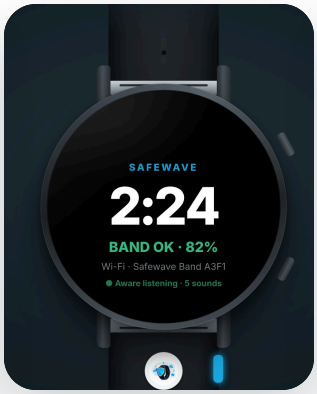

Four parts, one loop: send, feel, acknowledge

A supervisor sends an alert. Seconds later the associate feels the band buzz and reads the message on the watch. One press of the band's button, and the supervisor sees it acknowledged.

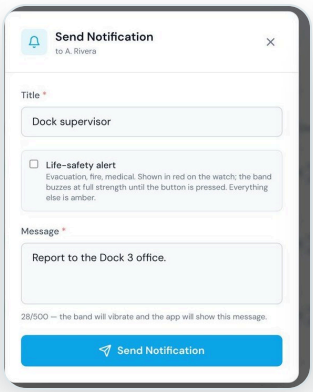

Safewave Band

On the wrist. Buzzes until its one button is pressed; that press is the acknowledgement.

Safewave Watch

A Galaxy Watch running Safewave. Links the band to the site Wi-Fi and shows every alert.

Dashboard

Supervisors manage people and bands, send alerts and alarms, and see who has acknowledged.

Phone app

Optional, where phones are allowed. Same alerts, same band, plus Aware on the phone.

This tour

02 An alert, start to finish

03 The dashboard

04 Sending alerts and alarms

05 Checking bands out and in

06 The Safewave Watch

07 Practising safely

08 Alerts and alarms on the phone

09 Safewave Aware on the watch

10 Training Safewave Aware

11 Team messaging

12 Built for the floor

13 The pilot, and next steps

OUR PRINCIPLE

Safewave adds a channel; it replaces nothing. Building alarms, strobes and evacuation procedures stay exactly as they are. Safewave makes sure they are also felt, by everyone.

02 HOW IT WORKS

An alert, start to finish

The watch holds the band's Bluetooth link and talks to the dashboard over the site Wi-Fi. The acknowledgement travels back the same way, and is retried until the dashboard has it.

Dashboard
The supervisor presses Notify

→ Wi-Fi

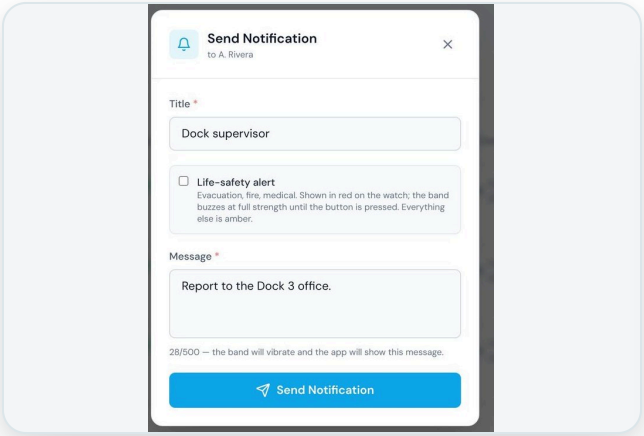

Safewave Watch
Shows the alert, even on a dark screen

→ Bluetoot

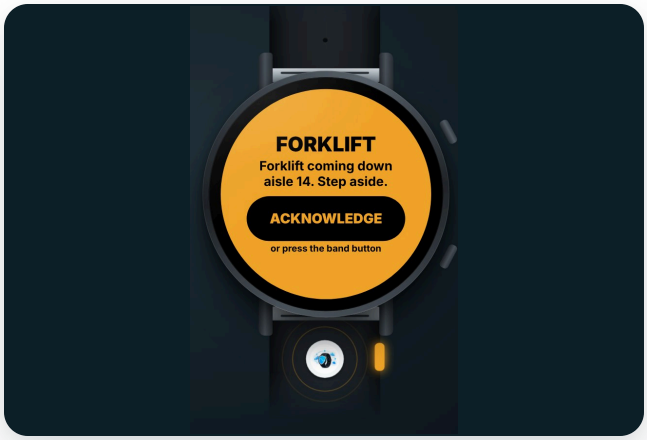

Safewave Band
Buzzes until the button is pressed

→ Ack

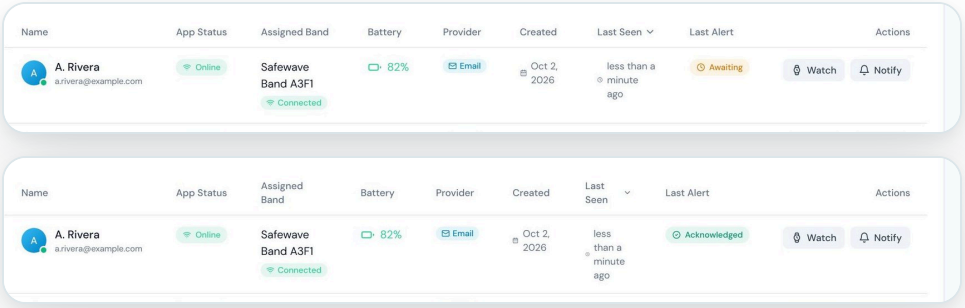

Dashboard
Awaiting turns Acknowledged

1 · Send. Notify on the associate's row, a short title and the message.

2 · Feel. The band buzzes nonstop and the watch shows the message until the associate presses the band button.

3 · Confirm. Last Alert on the dashboard reads Awaiting until the button is pressed, then Acknowledged.

Two kinds of alert, never confused

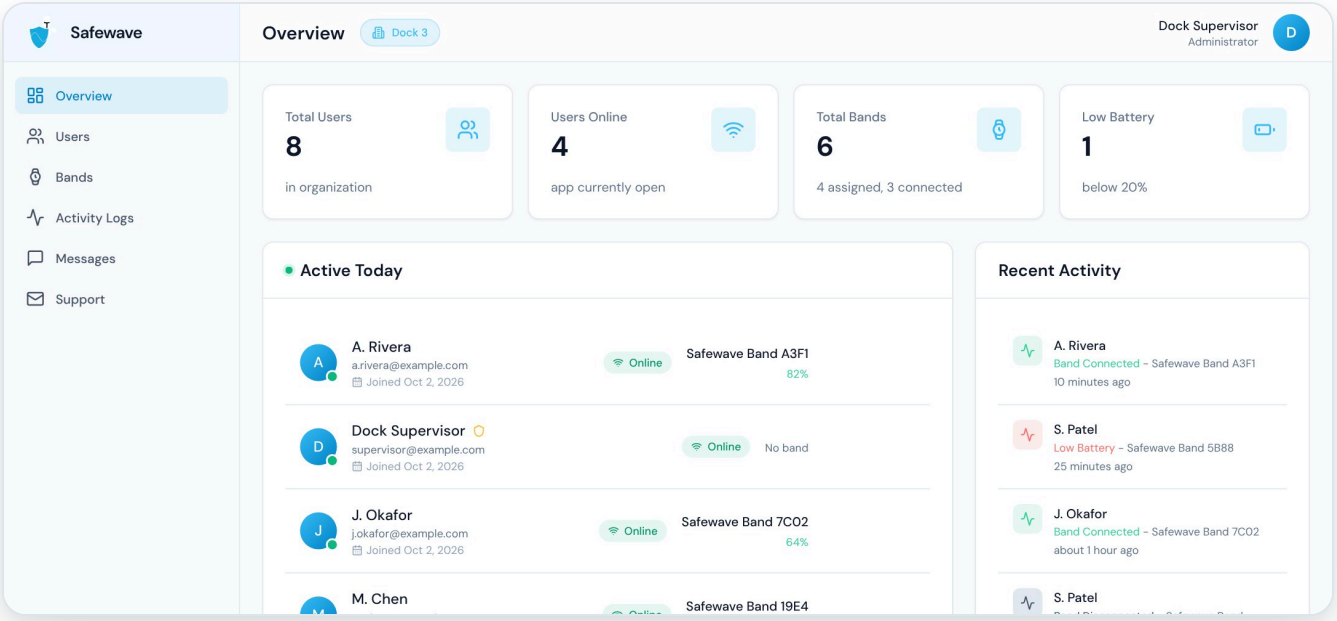

ROUTINE AND URGENT
Amber on the watch. "Report to the Dock 3 office." "Forklift coming down aisle 14."

LIFE SAFETY
Red on the watch, full-strength buzz until pressed. Evacuation, fire and medical only.

03 THE DASHBOARD

Everything a supervisor needs, on one screen

Supervisors sign in from any computer and see only their own site. The Overview answers the first question of every shift: is everyone connected?

Reading the Overview

1. **Users online**
   Who has Safewave open right now, out of everyone at the site.

2. **Bands**
   How many are assigned and how many are connected at this moment.

3. **Low battery**
   Bands under 20%, so they're swapped before they run out.

4. **Active today and recent activity**
   Who is on shift with which band, and the latest connects, disconnects and warnings.

The other pages

Users
Every associate, their band and battery, and Last Alert. Notify and Watch live here.

Bands
The fleet: check bands out and in, see battery and connection.

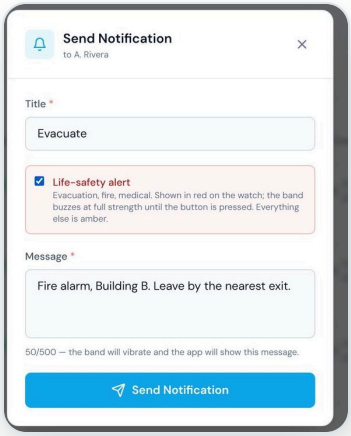

Activity Logs · Messages · Support
The record of every event, team channels, and a direct line to Safewave.

04 SENDING ALERTS AND ALARMS

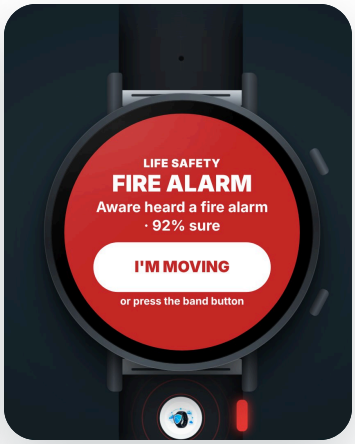

From Notify to the wrist in seconds

Every alert starts on the associate's row on the Users page. Here's the whole motion, including the life-safety alarm reserved for emergencies.

1. **Press Notify on their row**
   The Send Notification form opens, addressed to that associate.
2. **Write a short title and message**
   Keep it to what they need to do: "Report to the Dock 3 office."
3. **Life-safety only when it matters**
   Tick Life-safety for evacuation, fire or medical. The watch turns red and the band buzzes at full strength until the button is pressed.
4. **Send, then watch Last Alert**
   It reads Awaiting until the associate presses the band button, then Acknowledged. Follow up on anything still Awaiting.

The life-safety alarm: one box, ticked deliberately.

On the wrist: red, full strength, I'M MOVING or the band button acknowledges.

What every alert does

Wakes the watch
The associate never has to open anything; the alert comes to them.

Keeps buzzing
The band buzzes until acknowledged, with the watch's own motor repeating as a backup.

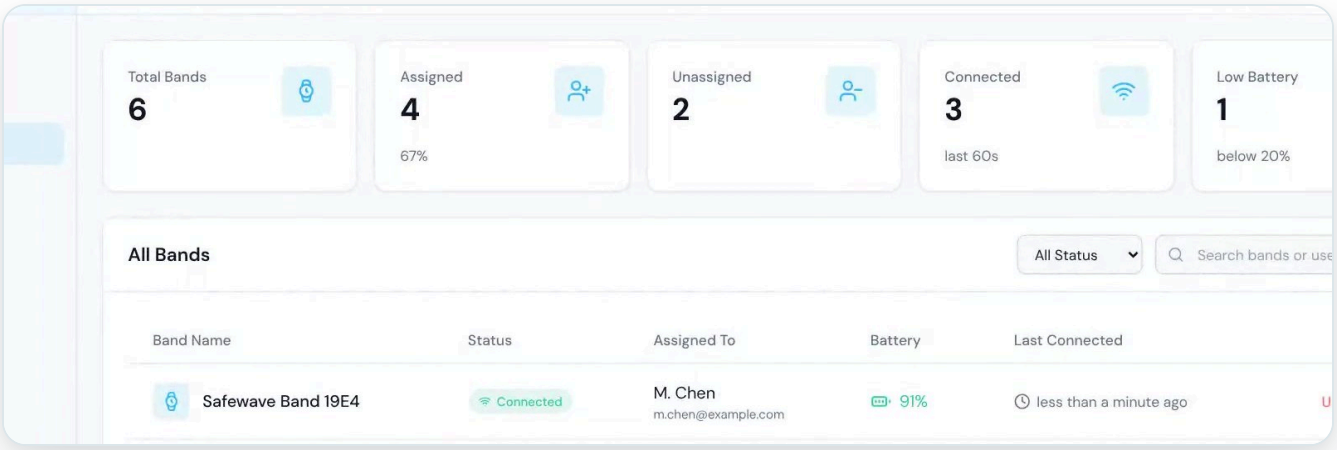

Never gets lost
If the watch is offline, the alert arrives the moment it reconnects.

Aware raises alarms too. When the watch hears a fire alarm or siren itself, it raises the same red life-safety alarm, with no supervisor needed. See section 09.

05 CHECKING BANDS OUT AND IN

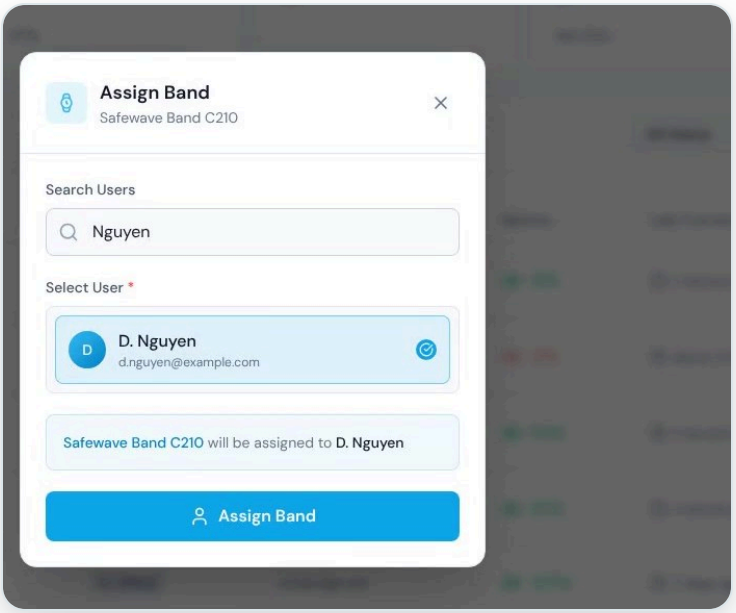

Bands move between shifts in two clicks

Bands are shared equipment. The Bands page tracks who has each one, so the next shift always starts with a charged band that's accounted for.

The Bands page: total, assigned, unassigned, connected and low-battery counts, then every band with who has it, its battery and when it last connected.

1. **Register once**
   An admin adds each new band from the Safewave for Business app (Register New Band). It then appears here.
2. **Check out at shift start**
   Find a free band, press Assign, search for the associate, and confirm with Assign Band. The band is theirs.
3. **During the shift**
   The associate's watch or phone connects to that band. A phone only lists the band assigned to them.
4. **Check in at shift end**
   Press Unassign and confirm. The band goes back to the pool and onto the charger for the next shift.
5. **Every move is logged**
   Each check-out and check-in is recorded in Activity Logs.

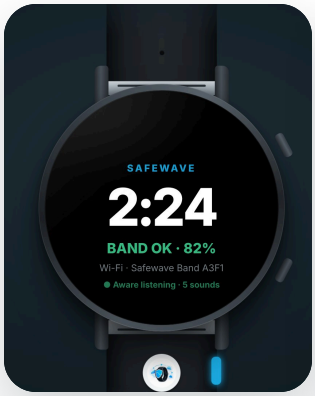

Checking a band out: pick the associate, confirm, done.

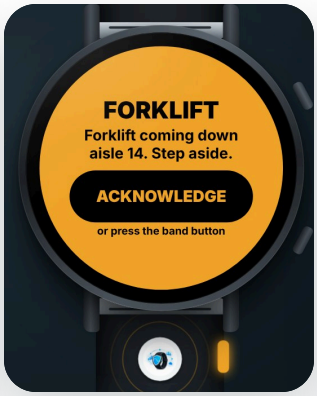

06 THE SAFEWAVE WATCH

The band's connection, on the wrist

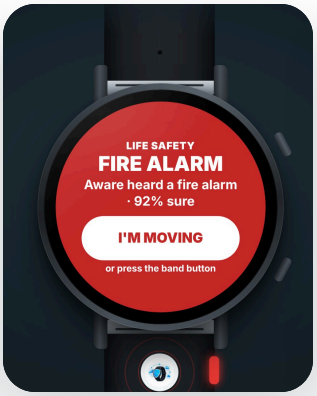

Safewave runs on a Samsung Galaxy Watch, locked so Safewave is the only app. It keeps the band connected all shift and says plainly when something needs attention.

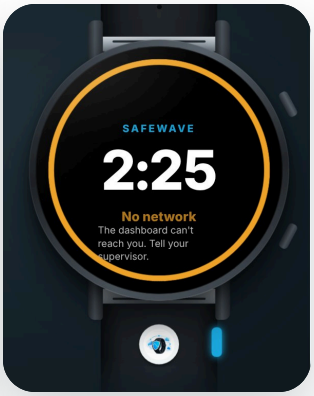

Ready. Band OK with its battery, the Wi-Fi network, and Aware listening.

An alert. Amber, with the message, until the band button is pressed.

Life safety. Red and full strength. I'M MOVING acknowledges.

Needs attention. An amber ring and a plain message when the band or Wi-Fi drops.

Setting up a watch: about five minutes

1 · Site Wi-Fi

Settings, Connections, Wi-Fi: the site's staff network.

2 · Open Safewave

The first screen is a keypad. No email on a watch.

3 · Pairing code

The supervisor presses Watch on the dashboard for a 6-digit code: single use, 10 minutes.

4 · Pick the band

Allow Bluetooth, hold the band close, pick it. Done.

An associate's shift

1. **Start**
   Take the checked-out band and the watch from the charger. Check Band OK and the Wi-Fi mark; Test buzz sends one pulse.
2. **An alert**
   Feel the buzz, read the watch, press the band button. The supervisor sees Acknowledged.
3. **Amber ring**
   The band is out of range or Wi-Fi dropped: move back into range or tell a supervisor.
4. **End**
   Watch and band back on the charger; the supervisor checks the band in.

Feel it before it matters

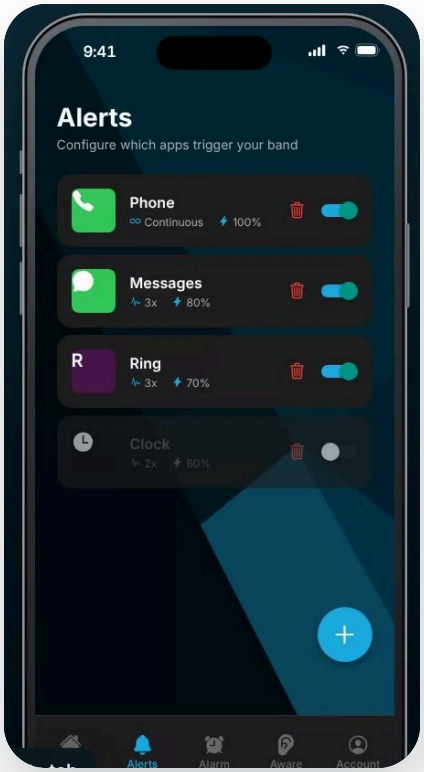

Every part of Safewave can be tested without a real emergency, so associates know exactly what an alert feels like before the day they need it.

A practice alert
Supervisors send one each shift during the pilot, from Notify.

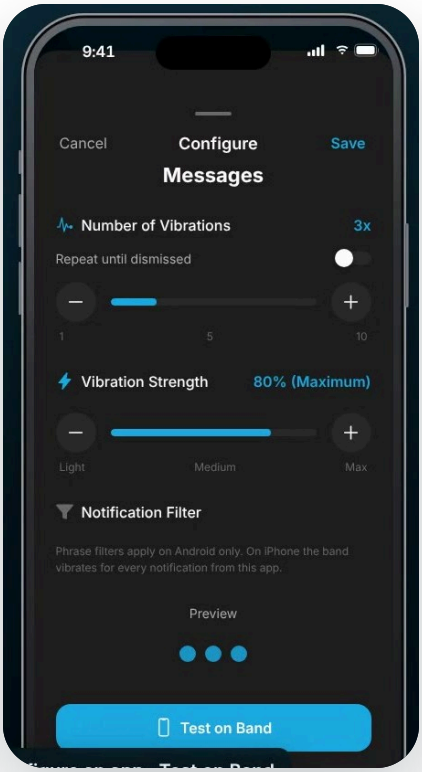

Test buzz
One pulse from the watch to the band at the start of a shift.

A fire-alarm drill
With Aware on, the watch hears the building alarm and raises the red alarm itself.

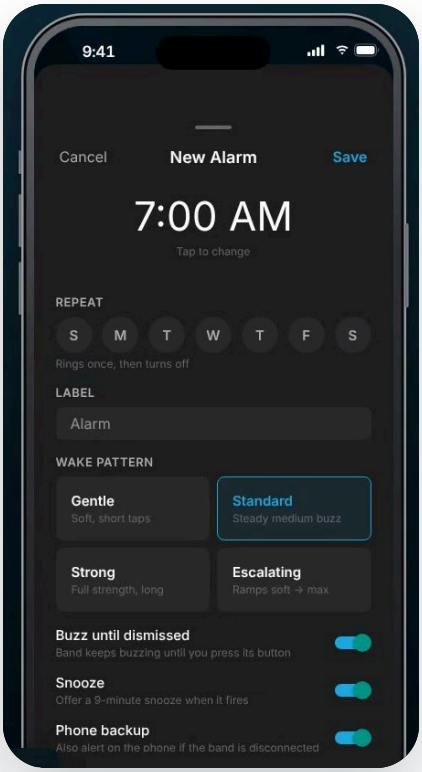

Where phones are allowed: Safewave for Business

Alerts. Choose which phone apps buzz the band (calls, messages, a doorbell camera), each with its own pattern.

Test on Band. Set vibration count and strength, then feel the pattern on the wrist before saving.

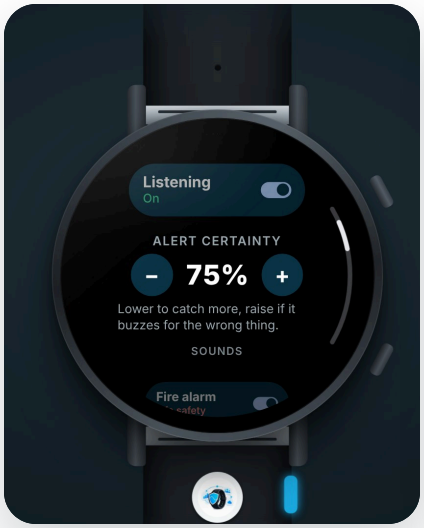

Alarm. A silent alarm clock: time, repeat days, and a wake pattern from gentle to escalating, with the phone as backup.

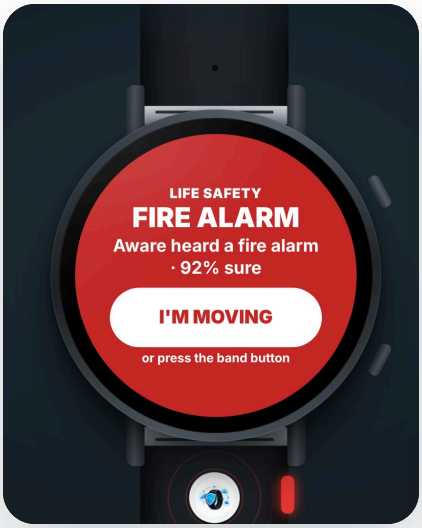

09 SAFEWAVE AWARE ON THE WATCH

The watch listens, so nothing important goes unheard

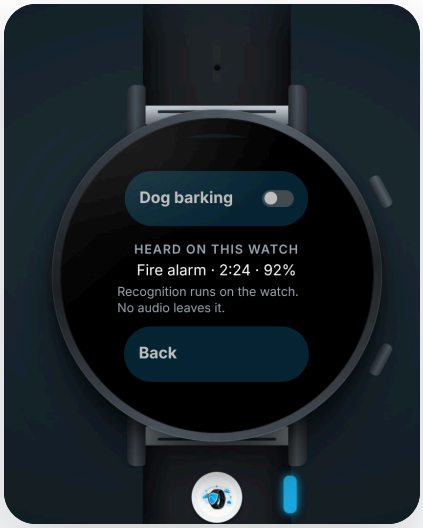

Aware recognizes important sounds on the watch itself and buzzes the band, with no supervisor needed. Recognition runs on the watch; no audio ever leaves it.

Choose the sounds. A switch for each sound, and an alert certainty from 50 to 95%.

A fire alarm goes off. The watch raises a red life-safety alarm; the band buzzes until acknowledged.

Heard on this watch. What was heard, when, and how sure Aware was.

Sounds the watch listens for

Life safety Fire alarm · Siren · Gunshot or explosion

Attention Alarm or buzzer · Vehicle horn · Reversing beeps · Shouting · Glass breaking · Knocking · Doorbell · Phone ringing, and more

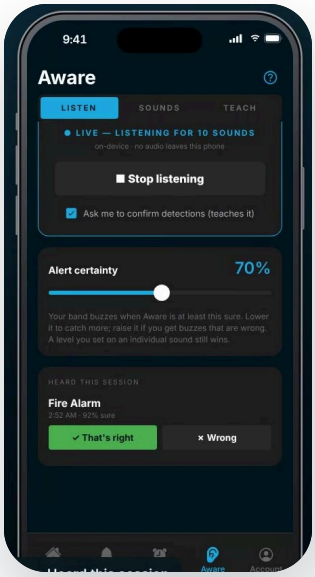

Built to avoid false alarms

- **Certainty:** a sound must score above the level (70% by default).
- **Confirmed:** heard in two of the last three seconds.
- **No repeats:** then quiet for 45 seconds.

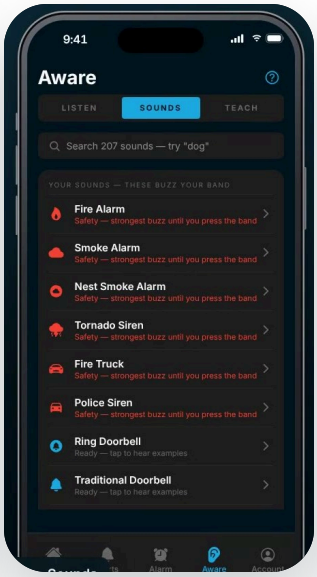

Aware adds to building alarms and supervisor alerts; it never replaces them. Listening uses more battery, so it's turned on only for the associates who need it.

Aware learns your site's sounds

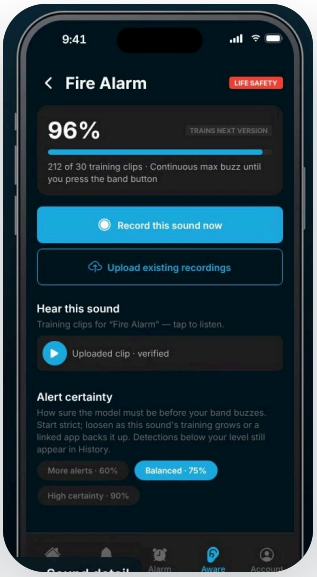

On the phone app, Aware comes ready-trained and keeps learning: from every confirmation an associate taps, and from sounds you teach it, like a forklift horn or a particular machine.

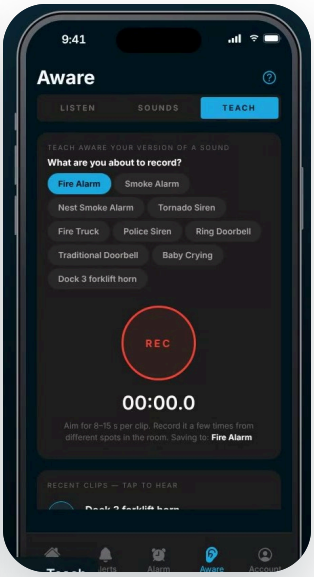

Listen. Start listening. With "Ask me to confirm" on, each detection asks That's right or Wrong; every answer teaches it.

Sounds. A ready-trained library: fire and smoke alarms, tornado and police sirens, fire trucks, doorbells.

One sound. Its training progress and clip count, its own certainty level, and linked apps like Ring or Nest that confirm it.

Teach. Record a few short clips of a site sound, name it, and share it with just you, your organization, or everyone.

Teaching a new sound, step by step

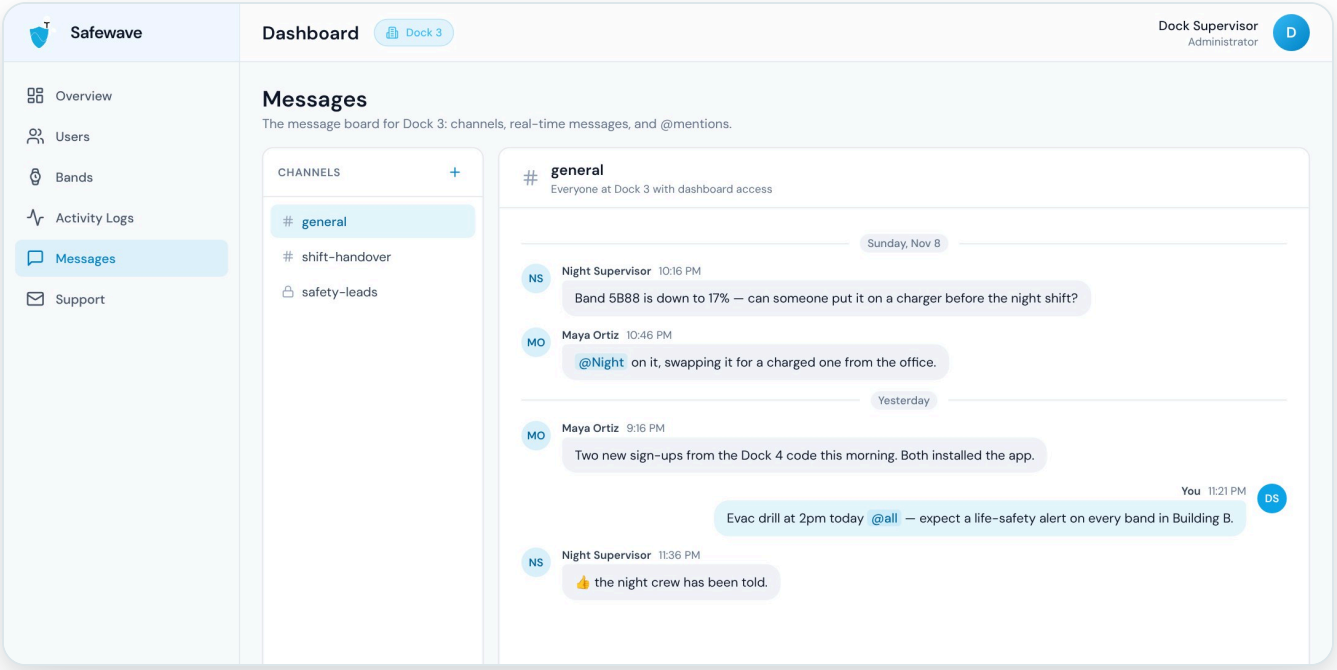

1. **Open Teach**
   Pick what you're about to record, or name a new sound.
2. **Record a few clips**
   Short recordings, from different spots on the floor.
3. **Share it**
   Choose who can use it: you, the site, or everyone.
4. **Confirm as it works**
   That's right or Wrong on each detection sharpens it.

Trained sounds live in the phone app's Aware. The watch listens for its built-in set of sounds, shown on the previous page.

11 TEAM MESSAGING

Supervisors stay in step, across shifts

Messages on the dashboard is a live, Slack-style space for the site's supervisors: handovers, drills, and anything that needs eyes on it.

Channels

A general channel for the site, plus channels by topic, such as shift handover.

Private channels

For a few people, such as the safety leads.

@mentions

Reach one supervisor, or @all before a drill.

SUPPORT, BUILT IN

Supervisors reach Safewave from the dashboard's Support page and follow the conversation there. During the pilot, Safewave also reviews alerts, acknowledgements and battery data every week.

12 BUILT FOR THE FLOOR

When something goes wrong, everyone can see it

Safewave never fails silently. The watch tells the associate, the dashboard tells the supervisor, and no alert is lost.

IF	WHAT SAFEWAVE DOES	WHAT THE PILOT DOES
Wi-Fi drops	The watch says so and the dashboard shows it Offline. Alerts sent meanwhile arrive the moment it reconnects; acknowledgements retry until recorded.	Test alerts in every work area on setup day.
The band walks out of range	The watch ring turns amber with a plain message. An alert that lands meanwhile buzzes the band the moment it reconnects.	Watch and band are worn together.
Battery runs low	The watch reports band and watch battery every 60 seconds; bands under 20% are flagged on the dashboard.	Full charge every shift; a full-shift battery test in week 1.
The watch restarts	Safewave starts again on its own after a reboot or update and reconnects the band.	Open Safewave after a restart to resume Aware.
Nobody acknowledges	The band keeps buzzing and the watch's motor repeats as a backup. The dashboard keeps showing Awaiting.	Supervisors follow up on anything still Awaiting.

Privacy and access

No audio leaves the device
Aware recognizes sounds on the watch or phone and keeps only what it heard and when.

Site by site
Supervisors see only their own site's associates, bands and alerts.

No passwords on watches
Watches sign in with a single-use code that expires in 10 minutes.

Five weeks from setup day to a decision

One site, one group of associates and their supervisors. Each phase starts only when the one before it has passed its check.

WEEK 0
Prepare
Wi-Fi details, people lists, accounts, bands registered and watches paired.
◆ **Wi-Fi and lists ready**

DAY 1
Setup day
Watches signed in, floor walk with test alerts, 15-minute associate training.
◆ **Alerts reach every work area**

WEEKS 1-2
Alerts on the wrist
Real alerts, a practice alert each shift, daily check-out and check-in, a battery test.
◆ **Alerts acknowledged; battery lasts**

WEEKS 3-4
Aware
Chosen sounds on for those who need them; one fire-alarm drill.
◆ **Drill run; detections reviewed**

WEEK 5
Review
Results and feedback together. Decide: end, extend, or roll out further.

Setup day

WHEN	WHAT	WHO
Before the shift	Join each watch to the site Wi-Fi and sign it in with a pairing code; check out each band	Safewave, supervisors
Floor walk	Carry a watch through every work area and send test alerts from the dashboard	Safewave, site lead
Supervisors	Notify, Life-safety, Last Alert, checking bands out and in, Messages	Safewave
Associates	15 minutes: feel an alert, press the band button, red versus amber, charging	Safewave

Who does what

WHO	RESPONSIBILITIES
Safewave	Prepares and pairs every watch and band, sets up the dashboard and accounts, runs setup day and training, reports weekly, leads the review.
Site lead	Single point of contact; confirms the details, schedules setup day, gathers feedback.
Amazon IT	A staff Wi-Fi network for the watches; device approval on site.
Supervisors, associates	Send and acknowledge alerts, check bands out and in, keep everything charged.

Short training, a few things from the site, clear measures

Training by role

ROLE	WATCH	THEN
Associates	The 3-minute overview, then alerts on the watch (11:19) and Aware on the watch (16:10)	15 minutes hands-on on setup day
Supervisors	The full 22-minute training video	The dashboard demo: Notify, Life-safety, check-out, watch pairing
Site lead	The overview and Getting set up	Chapter 1 of the watch guide
Amazon IT	Getting set up at 5:49: how the watch joins Wi-Fi	The Wi-Fi steps in the watch guide

What we need from the site

- [ ] **Wi-Fi:** a staff network with a password covering every work area. A guest network with a sign-in page won't work on a watch.
- [ ] **Device approval** for Galaxy Watches and Bluetooth bands.
- [ ] **People lists:** supervisors' names and work emails; associates' names and shifts.
- [ ] **A charging spot** near where shifts start.
- [ ] **A site lead** and a backup.

How we measure

- [ ] **Alerts acknowledged,** and how fast
- [ ] **Connected** through the whole shift
- [ ] **Battery** left at the end of a full shift
- [ ] **Aware:** sounds caught and false alarms
- [ ] **Would they keep it?** A week-4 survey and the review

Targets for each measure are agreed together at kickoff.

15 NEXT STEPS

Getting started

Five steps get us to setup day.

1. **Quote and W-9**
   Sent by Safewave under separate cover.
2. **Confirm the pilot**
   The site, associates, supervisors, site lead, and targets for each measure.
3. **Wi-Fi and people lists**
   Network details from IT; lists from the site lead.
4. **Pick setup day**
   Safewave registers the bands and prepares and pairs every watch beforehand.
5. **Watch the training video**
   Supervisors watch it and try the dashboard demo.

See it for yourself

All three open in any browser, on a computer or a phone, with no sign-in.

RESOURCE	WHAT IT SHOWS
Training video safewave-command-center.web.app/training	22 minutes in chapters: the whole system, setup, alerts, the phone app, Aware, messaging and keeping things healthy.
Safewave Watch guide …/training/safewave-watch-guide.pdf	31 pages, screen by screen: setting up a watch and Aware on the watch, then dashboard, phone and watch side by side.
Dashboard demo safewave-command-center.web.app/dashboard-demo	The real dashboard on sample data. Press Notify and watch Awaiting turn Acknowledged. Nothing is sent.
